Connect – Android

These instructions are for connecting Android devices to the School wifi.

These instructions were written using Android version 9 and 10.

For version 11 the settings are presented on your device in a different order but they should be set the same way.

To find out what version of Android you have, select Settings, About Phone, Software Version.

1. Go into 'Settings', 'Network & Internet', 'Wi-Fi' and click 'KKHS_Mahi'.
2. Set 'EAP method' to 'PEAP'.
3. Set 'Phase 2 authentication' to 'MSCHAPv2'.
4. Set 'CA certificate' to 'Do not validate'.
5. For 'Identity' enter your School network username (short form e.g. 'HPotter').
6. Scroll down. Leave 'Anonymous identity' blank.
7. For 'Password' enter your School network password.
7. Click 'Advanced options', scroll down and check:
'Metered' is set to 'Detect automatically',
'Proxy' is set to 'None', and
'IP settings' is set to 'DHCP'.
8. Click 'Connect'.

The installation details may differ on older versions, but the concepts are the same.
